

## The Original Cove™

### All above-ground pools need a cove.

Read any pool manufacturer's installation instructions and you will see: "The cove is a vital structural element of your pool." For over 30 years, Gladon dealers have recognized this fact and have stopped sending their customers and profits to the sand/gravel/topsoil people. By including Gladon Pool Cove in pool packages or by offering it as an add-on item, Gladon dealers have increased profits significantly, without expanding their customer base. In addition to profits, customer satisfaction is also increased. Liner failures due to cove washout will be eliminated. Do-it-yourself customers will thank you for selling them a product that will save hours of backbreaking work, and provides professional results.

Installation crews can increase productivity and eliminate call backs simply by using Gladon Pool Cove. **The time has come to provide your pool customers with a product they really need and want, Gladon Pool Cove!**

**Gladon Original Cove** is a 3 inch by 4 inch preformed cove made from chemically neutral, flexible Polyethylene foam and is safe for use with all pool liners. Lightweight and easy to handle, Gladon Original Cove comes in 48 inch long sections that bend easily without breaking and are compatible with virtually all pool brands. Its unique black plastic backing strip makes it easy to install in all makes of pools. The PVC backing strip locks each section of cove into the bottom rail, allowing it to move as the pool wall expands and contracts. Unlike sand or dirt, Gladon Original Cove can not be washed out and will not hold moisture against metal components. Original Cove reduces corrosion and may add years of life to a pool. Because Gladon Original Cove is made from a high density foam (2.3 lbs/ft<sup>3</sup>), it will not change shape or indent, making pool cleaning easier. All these valuable features make selling Gladon Original Cove easy and profitable. Available in floor display cartons with individually UPC coded sections.
