

GeoGuard™

GeoGuard™ by Gladon is a 9-ounce thick nonwoven polyester geo-textile first developed to protect trash dump liners. Having been used for decades in landfills, it is laid down as a liner before debris has been discarded, essentially protecting our ground water supply from being contaminated.

GeoGuard™, a felt type product that is almost as puncture-proof as it is thick, provides a protective layer between your swimming pool's liner and its sand or soil base and is designed to provide tremendous strength while providing comfort for your tired and aching feet. Because it is pre-cut to all standard pool sizes, GeoGuard™ is easy to install. GeoGuard's™ geotextile material (resistant to all acids, alkalis, salt, and oils) prevents cuts and punctures to the vinyl liner caused by rocks, glass, roots and the highly invasive *Cyperus rotundus*, aka. nut grass, your pool liner's greatest enemy!

GeoGuard™ is available in all standard pool sizes.

BENEFITS:

- Designed to be installed easily in minutes
- No cutting and no tapping
- Protects and virtually eliminates vinyl pool liner bottom leaks
- Extends the life of your pool liner by stopping *Cyperus rotundus*, aka. nut grass from growing through your swimming pool liner
- Reduces heat loss
- Provides an extra layer of cushioning under pool liners
