

Scale Off™

- a revolutionary new product to remove calcium carbonate scale and efflorescence.
- designed specifically to solve one of the worst swimming pool area maintenance problems.
- effective in removing approximately 2-4 mils of scale per application.

Power Blue™ Scale Off

DIRECTIONS FOR USE:

Designed specifically to solve one of the worst swimming pool area maintenance problems, Power Blue *Scale Off* is effective at removing approximately 2-4 mils of scale per application. On the initial application, it may be most effective to remove thick build up using a commercial paint scraper on hard solid surfaces.

Application: Spray apply Power Blue *Scale Off* to dry tile, glass block, vinyl or stucco using the trigger spray nozzle to stream (do not mist or aerosolize) spray directly onto the scale, and watch this amazing product go to work immediately dissolving the scale. Spray and brush, repeat until scale is gone, then rinse.

Subsequent Applications: At first sign of reappearance of white scale or efflorescence, spray apply Power Blue *Scale Off* again for easy removal.

Note: The first time you use Power Blue *Scale Off*, apply to a small test spot in an inconspicuous area to insure no adverse effects occur to the surface being cleaned. Do not use on aluminum or marble. Store in a cool place.
