

PRO SERIES® ProZymes® Pool Instructions

Directions for use:

This product is designed for use in properly balanced pool water.

Initial Start-Up: In addition to the maintenance dose, add 1 ounce for every 1000 gallons all at once, every 7 days for the first 2 to 5 weeks, until the desired results are achieved. This additional amount is necessary to speed up the removal of the pre-existing non-living organic load.

Maintenance Dose:

Light to medium bather load: 1 ounce for every 3000 gallons per week.

Heavy bather load: 1 ounce for every 2000 gallons per week (most common pool dosage rate).

Very heavy bather load: 1 ounce for every 1000 gallons per week.

Important: Sanitizer level should be below 5ppm before adding this product.
